

THE 48-HOUR TURNAROUND BLUEPRINT

How to Eliminate Tool Assembly Bottlenecks and Ensure 15,000 PSI Reliability.

Presented by Energy Assembly & Testing Services (Energy ATS)

The Lead-Time Crisis

Why wait 30 days when the well won't wait for anyone?

In the Texas Oil & Gas sector, time isn't just money; it's your competitive edge. The current industry standard of 2-week lead times for oilfield tool assembly and testing is a bottleneck that creates:

- **Excessive NPT** (Non-Productive Time).
- Delayed fleet mobilization.
- Missed critical operational windows.

At Energy ATS, we broke that cycle. We have optimized our workflows to offer a Rush Order Turnaround of 24 to 48 hours, without sacrificing a single shred of technical precision.

Built Tight – Precision Torque Capabilities

Tool integrity starts at the connection.

Not all torque machines are created equal. For high-scale tools, precision is non-negotiable. Our specialized facility features:

- **19ft Torque Machine:** Designed to handle complex assemblies and long-stroke components.
- **Diameter Range:** From 2 3/8" up to 22" (Headstock and Tailstock).
- **Controlled Power:** Up to 60,000 FT.LBS of maximum torque, fully calibrated and documented.
- **Heavy-Duty Vises:** Strategically positioned for controlled support of tools and components of varying sizes.

Tested Right – 15,000 PSI Hydrostatic Testing

If it's not tested to the limit, it's not ready for the field.

A downhole failure is catastrophic. Our hydrostatic testing protocol eliminates the guesswork:

- **15,000 PSI Capacity:** High-pressure testing for completion tools, liner hangers, packer & seal assemblies, and float equipment.
- **100% Full Traceability:** Every test is digitally documented, from initial pressure build-up to final certification.
- **On-Demand Documentation:** We deliver test certificates alongside the tool, ensuring your HSE and compliance teams have everything they need for immediate deployment.

Delivered Fast – The Energy ATS Advantage

Local Scale. Immediate Response.

We are the strategic partner for Oilfield Service (OFS) companies and independent operators in Texas who demand:

1. **Speed:** 24-48 hour turnaround on rush orders.
2. **Agility:** The ability to rapidly scale operations up or down based on market demand shifts.
3. **Texas-Based Reliability:** We are local, we are responsive, and we understand the urgency of the Permian and the Energy Corridor.
4. **Engineering Collaboration:** On-demand technical support and assembly design collaboration.

Do you have a tool that needed to be in the field yesterday?

Stop accepting delays. Start getting results.

Take back control of your operational timeline. Request a quote today and experience the difference of a service that delivers in days, not weeks.

THE 48-HOUR TURNAROUND BLUEPRINT

In "THE 48-HOUR TURNAROUND BLUEPRINT," discover how Energy Assembly & Testing Services revolutionizes the oil and gas sector by eliminating assembly bottlenecks with a rapid 24 to 48-hour turnaround. Through precision torque capabilities and rigorous 15,000 PSI hydrostatic testing, Energy ATS ensures that tools are ready for the field without compromising reliability. Take control of your operational timeline and experience unmatched speed and efficiency in tool assembly and testing.
